Twelve Christmas Wishes from Friends of Lana'i.....

On the first night of Christmas, Governor Abercrombie announces that Big Wind will NOT be going to Lana'i or Moloka'i. "Ghosts of Christmas past and future have convinced me," he said, "that we will solve our energy challenges without destroying our two most rural islands."

On the second night of Christmas, Lana'i's new majority landowner announces that the land previously targeted for an industrial wind power plant for O'ahu will be turned over to a consortium

of nonprofits to manage as a cultural and educational preserve, with an established endowment.

On the third night of Christmas, the Public Utilities Commission announces its new policy for 2013: complete transparency of information relevant to public policy issues. "No more secret documents that hide the State's energy policies," said PUC spokesperson Kringle.

On the fourth night of Christmas, the ILWU

announces that its theme for 2013 will be to work for their members, not their bosses. No longer will they fight to enhance corporate greed, but instead, will work to preserve the economic lifeblood of their members with a longterm perspective, focused on re-training programs.

On the fifth night of Christmas, the Federal

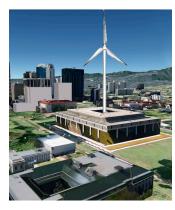

Department of Energy unequivocally announces that the recent statewide PEIS testimony convinced them that there should NOT be any undersea transmission cable to Lana'i and/or Moloka'i. "Other ways to secure O'ahu's fossil fuel dependence can be found that do not harm those two very special, fragile islands," said the DOE spokesperson.

On the sixth night of Christmas, the County of Maui, in partnership with a major national healthcare provider, announce plans to build a community hospice and long-term care facility on Lana'i, enabling residents to live out their last days on their home island.

On the seventh night of Christmas, a consortium of Hawaii's major statewide nonprofit organizations announce their collective overwhelming opposition to Big Wind on Lana'i and Moloka'i. Groups including the Nature Conservancy, Sierra Club and Blue Planet said in their press release that they "...now recognize that the extraordinarily expensive, irreparably destructive Big Wind on Lana'i project was really about enriching one already rich mainland

developer. Better solutions exist to reduce our dependency on fossil fuels." Instead, these organizations pledged to work with Larry Ellison in efforts to make Lana'i a world-class model of energy self-sufficiency.

On the eighth night of Christmas, the Legislature announces its

intention to revisit the Renewable Portfolio Standards and the Hawaii Clean Energy Initiative, acknowledging that these standards have unfortunately driven HECO and our energy policymakers to a onesolution approach. "Turning Lana'i and Moloka'i into industrial parks for O'ahu is not how we should meet those goals," said the Legislature's spokesperson. "Better we turn O'ahu's air conditioners down three degrees."

On the ninth night of Christmas, Larry Ellison announces plans to make Lana'i completely energy and food self-sufficient. Seeking proposals from around the world, the new majority landowner announces: "Lana'i will be a world-class model of sustainability. Surrounded by water and enriched with a creative and industrious population, together we can show the world how to do this."

On the tenth night of Christmas, Governor Abercrombie announces that rather than seek a replacement for Senator Inouye from among the "same old, same old," he would reach out to our younger generation of leaders by appointing Kanohowailuku Helm of Moloka'i to complete Senator Inouye's term.

On the eleventh night of Christmas, Friends of Lana'i bid farewell to Big Wind on Lana'i.

And on the twelfth night of Christmas, the world is at peace...
